

# SMART CONTRACT CODE REVIEW AND SECURITY ANALYSIS REPORT

# Worm Jim

\$JIM

11/05/2024

# TOKEN OVERVIEW

---

## Fees

- Buy fees: 0%
- Sell fees: 0%

## Fees privileges

- Can change fees up to 100%

## Ownership

- Owned

## Minting

- No mint function

## Max Tx Amount / Max Wallet Amount

- Can't change max tx amount or max wallet amount

## Blacklist

- Blacklist not function detected

## Other privileges

- Can exclude / include from fees
-

TECHNICAL DISCLAIMER

# DISCLAIMER

The information provided on this analysis document is only for general information and should not be used as a reason to invest.

FreshCoins Team will take no payment for manipulating the results of this audit.

The score and the result will stay on this project page information on our website <https://freshcoins.io>

FreshCoins Team does not guarantees that a project will not sell off team supply, or any other scam strategy ( RUG or Honeypot etc )

# INTRODUCTION

**FreshCoins** (Consultant) was contracted by **Worm Jim** (Customer) to conduct a Smart Contract Code Review and Security Analysis.

**0x775Ad2fE15Ef9368522617CdCCc5B97eb9bCbF69**

Network: **Binance Smart Chain (BSC)**

This report presents the findings of the security assessment of Customer's smart contract and its code review conducted on **11/05/2024**

# AUDIT OVERVIEW

Security Score  
**HIGH RISK**  
Audit FAIL

**Static Scan**  
Automatic scanning for  
common vulnerabilities

**ERC Scan**  
Automatic checks for  
ERC's conformance

High

Medium

Low

Optimizations

Informational

No.	Issue description	Checking Status
1	Compiler Errors / Warnings	Passed
2	Reentrancy and Cross-function	Passed
3	Front running	Low
4	Timestamp dependence	Passed
5	Integer Overflow and Underflow	Passed
6	Reverted DoS	Passed
7	DoS with block gas limit	Low
8	Methods execution permissions	Passed
9	Exchange rate impact	Passed
10	Malicious Event	Passed
11	Scoping and Declarations	Passed
12	Uninitialized storage pointers	Passed
13	Design Logic	Passed
14	Safe Zeppelin module	Passed

# OWNER PRIVILEGES

- Contract owner can't mint tokens after initial contract deploy
- Contract owner can't exclude addresses from transactions
- Contract owner can exclude/include wallet(s) from tax

```
function removeLimits(address[] calldata accounts, bool excluded) public onlyOwner {
    for(uint256 i = 0; i < accounts.length; i++) {
        _isExcludedFromFee[accounts[i]] = excluded;
    }
}
```

- Contract owner has to call **openTrade** function to enable trade

Please note that owner wallet retains the ability to engage in trading, even in situations where trading has been disabled

```
function openTrade() external onlyOwner() {
    IUniswapV2Router02 _uniswapV2Router = IUniswapV2Router02(0x10ED43C718714eb63d5aA57B78B54704E256024E);
    uniswapV2Router = _uniswapV2Router;
    uniswapV2Pair = IUniswapV2Factory(_uniswapV2Router.factory())
        .createPair(address(this), _uniswapV2Router.WETH());

    _isExcludedFromFee[owner()] = true;
    _isExcludedFromFee[address(this)] = true;
    _isExcludedFromFee[_developmentAddress] = true;
    _isExcludedFromFee[_marketingAddress] = true;
}

_transfer function line 350
.
.
.
if (!tradingOpen) {
    require(from == owner(), "TOKEN: ");
}
.
.
.
```

## ● Contract owner can change fees up to 100%

```
function settings(uint256 marketingFeeOnBuy, uint256 marketingFeeOnSell, uint256 taxFeeOnBuy, uint256 taxFeeOnSell) public onlyOwner {
    _marketingFeeOnBuy = marketingFeeOnBuy;
    _marketingFeeOnSell = marketingFeeOnSell;
    _taxFeeOnBuy = taxFeeOnBuy;
    _taxFeeOnSell = taxFeeOnSell;
}
```

## ● Contract owner can swap manually

```
function manualswap() external {
    require(_msgSender() == _developmentAddress || _msgSender() == _marketingAddress);
    uint256 contractBalance = balanceOf(address(this));
    swapTokensForEth(contractBalance);
}

function manualsend() external {
    require(_msgSender() == _developmentAddress || _msgSender() == _marketingAddress);
    uint256 contractETHBalance = address(this).balance;
    sendETHToFee(contractETHBalance);
}
```

## ● Contract owner can renounce ownership

```
function renounceOwnership() public virtual onlyOwner {
    emit OwnershipTransferred(_owner, address(0));
    _owner = address(0);
}
```

### Recommendation:

The team should carefully manage the private keys of the owner's account. We strongly recommend a powerful security mechanism that will prevent a single user from accessing the contract admin functions. The risk can be prevented by temporarily locking the contract or renouncing ownership.

# CONCLUSION AND ANALYSIS

Smart Contracts within the scope were manually reviewed and analyzed with static tools.

Audit report overview contains all found security vulnerabilities and other issues in the reviewed code.

Found 2 HIGH issues during the first review.

# TOKEN DETAILS

## Details

Buy fees:	0%
Sell fees:	0%
Max TX:	1,000,000,000
Max Wallet:	1,000,000,000

## Honeypot Risk

Ownership:	Owned
Blacklist:	Not detected
Modify Max TX:	Not detected
Modify Max Sell:	Not detected
Disable Trading:	Not detected

## Rug Pull Risk

Liquidity:	N/A
Holders:	Clean

# JIM TOKEN ANALYTICS & TOP 10 TOKEN HOLDERS

The top 10 holders collectively own 100.00% (1,000,000,000.00 Tokens) of Worm Jim

Token Total Supply: 1,000,000,000.00 Token | Total Token Holders: 3

## Worm Jim Top 10 Token Holders

Source: BscScan.com

(A total of 1,000,000,000.00 tokens held by the top 10 accounts from the total supply of 1,000,000,000.00 token)

Rank	Address	Quantity (Token)	Percentage
1	<a href="#">0xA92fbc60...ed0fAd9a3</a>	742,250,000	74.2250%
2	<a href="#">Pinksale: PinkLock V2</a>	250,000,000	25.0000%
3	<a href="#">0x5B9E9Cf2...9c20E2876</a>	7,750,000	0.7750%

# TECHNICAL DISCLAIMER

Smart contracts are deployed and executed on the blockchain platform. The platform, its programming language, and other software related to the smart contract can have its vulnerabilities that can lead to hacks. The audit can't guarantee the explicit security of the audited project / smart contract.
