

SMART CONTRACT CODE REVIEW AND SECURITY ANALYSIS REPORT

TOKEN OVERVIEW

Fees

• Buy fees: 4%

• Sell fees: 4%

Fees privileges

Can't change fees

Ownership

Owned

Minting

No mint function

Max Tx Amount / Max Wallet Amount

· Can't change max tx amount and max wallet amount

Blacklist

Blacklist function not detected

Other privileges

· Can exclude / include from fees

INTRODUCTION

FreshCoins (Consultant) was contracted by

Bino Token (Customer) to conduct a Smart Contract Code Review and

Security Analysis.

0xcF2a790bCF171D2B29B1EfC7c6D834Ee883aa665

Network: Binance Smart Chain (BSC)

This report presents the findings of the security assessment of Customer's smart contract and its code review conducted on 26/03/2024

AUDIT OVERVIEW

Static Scan Automatic scanning for common vulnerabilities

ERC Scan
Automatic checks for ERC's conformance

- 0 High
- 0 Medium
- 0 Low
- Optimizations
- 0 Informational

No.	Issue description	Checking Status	
1	Compiler Errors / Warnings	Passed	
2	Reentrancy and Cross-function	Passed	
3	Front running	Low	
4	Timestamp dependence	Passed	
5	Integer Overflow and Underflow	Passed	
6	Reverted DoS	Passed	
7	DoS with block gas limit	Low	
8	Methods execution permissions	Passed	
9	Exchange rate impact	Passed	
10	Malicious Event	Passed	
11	Scoping and Declarations	Passed	
12	Uninitialized storage pointers	Passed	
13	Design Logic	Passed	
14	Safe Zeppelin module	Passed	

OWNER PRIVILEGES

- Contract owner can't mint tokens after initial contract deploy
- Contract owner can't exclude addresses from transactions
- Contract owner can exclude/include wallet from tax

```
function excludeFromFee(address account) public onlyOwner {
    __isExcludedFromFee[account] = true;
}

function includeInFee(address account) public onlyOwner {
    __isExcludedFromFee[account] = false;
}
```

Contract owner can exclude/include wallet from rewards

```
function excludeFromReward(address account) public onlyOwner() {
    require(!_isExcluded[account], "Account is already excluded");
   if (_rOwned[account] > 0) {
      _tOwned[account] = tokenFromReflection(_rOwned[account]);
   _isExcluded[account] = true;
   _excluded.push(account);
function includeInReward(address account) external onlyOwner() {
    require(_isExcluded[account], "Account is not excluded");
    for (uint256 i = 0; i < excluded.length; <math>i++) {
      if (_excluded[i] == account) {
        _excluded[i] = _excluded[_excluded.length - 1];
        _{tOwned[account] = 0;}
        _isExcluded[account] = false;
        excluded.pop();
        break;
   }
```

Contract owner can change swap settings (with threshold)

```
function updateSwapTokensAtAmount(uint256 amount) external onlyOwner {
    require(amount >= 500, "Swap amount should not be 0");
    swapTokensAtAmount = amount * 10 ** _decimals;
}
```

Contract owner can change marketingAddress address

Default value:

marketingAddress: 0x10A11863b25302CB1d2E549A206254ff3839CC19

```
function updateMarketingWallet(address newWallet) external onlyOwner {
    require(
        newWallet != address(0),
        "The marketing wallet cannot be the value of zero"
    );
    require(!newWallet.isContract(), "Marketing wallet cannot be a contract");
    marketingAddress = newWallet;
}
```

Contract owner has ability to retrieve any token held by the contract

Native tokens excluded

```
function rescueBNB(uint256 weiAmount) external onlyOwner {
    require(address(this).balance >= weiAmount, "insufficient BNB balance");
    payable(msg.sender).transfer(weiAmount);
}

function rescueAnyBEP20Tokens(address _tokenAddr, address _to, uint _amount) external onlyOwner {
    require(_tokenAddr != address(this), "Cannot transfer out Token123!");
    IERC20(_tokenAddr).transfer(_to, _amount);
}
```

Contract owner can transfer ownership

```
function transferOwnership(address newOwner) public virtual onlyOwner {
    require(newOwner != address(0), "Ownable: new owner is the zero address");
    _setOwner(newOwner);
}
```

Contract owner can renounce ownership

```
function renounceOwnership() public virtual onlyOwner {
    _setOwner(address(0));
}
```

Recommendation:

The team should carefully manage the private keys of the owner's account. We strongly recommend a powerful security mechanism that will prevent a single user from accessing the contract admin functions. The risk can be prevented by temporarily locking the contract or renouncing ownership.

CONCLUSION AND ANALYSIS

Smart Contracts within the scope were manually reviewed and analyzed with static tools.

Audit report overview contains all found security vulnerabilities and other issues in the reviewed code.

Found no HIGH issues during the first review.

TOKEN DETAILS

Details

Buy fees: 4%

Sell fees: 4%

Max TX: 500,000

Max Wallet: 500,000

Honeypot Risk

TECHNICAL DISCLAIMER

Smart contracts are deployed and executed on the blockchain platform. The platform, its programming language, and other software related to the smart contract can have its vulnerabilities that can lead to hacks. The audit can't guarantee the explicit security of the audited project / smart contract.
